

# APT<sub>X</sub>4869

---

## Description

---

**APT<sub>X</sub>** is an abbreviation of "Apoptoxin", and, as the name implies, it involves the activation of apoptosis: the mechanism by which cells kill themselves. APT<sub>X</sub> contains ingredients which have other functions as well. It contains a component which activates telomerase: an enzyme which lengthens the caps at the end of DNA whose length limits the number of times a cell can divide.
